**Submitting the Project Design Task Plan of
Extending the Air Force Integrated Command
Platform to the Participating Battle Troops**

General Staff, General Logistics Department:

According to the instruction spirit of General Staff Communication [2007] No. 354 "Assign the Task of Extending the Air Force Integrated Command Platform to the Participating Battle Troops", combined with the actual needs of the Air Force integrated command platform construction, the construction project design task plan is drafted, which is hereby submitted.

According to the plan, the construction task was assigned to a total of 19 command posts (excluding

the Shanghai Metropolitan Command) to build the integrated command platform system. Among them, there are 8 underground command systems and 11 aboveground command systems. The construction scope mainly includes new constructions or expansion of the communication system, the transformation of the integrated wiring system, the installation of integrated command platform equipment, and the construction of necessary optical cable connections and other supporting projects. According to the calculation, the above-mentioned 19 construction projects will require a total construction expanse of 76.1598 million yuan.

Please give instructions on whether this plan is appropriate.
